

## ABSTRACT

It is an object of the present invention to reduce uneven glossiness of images formed with pigmented ink compositions on  
5 glossy inkjet media by setting the type of surfactant and the content of an alkanediol and a glycol ether. The ink composition of the present invention contains a pigment, an alkanediol, a glycol ether, a polyether-modified polysiloxane compound, a water-soluble organic solvent, and water, and the  
10 sum of the contents of alkanediol and glycol ether is 10 wt% or more, but less than 20 wt%.
